

Cleveland Clinic Department of Plastic Surgery is offering a one-year fellowship position in reconstructive microsurgery for the 2024-2025 academic year.

Fellows will gain significant experience in microneurovascular reconstruction with exposure to all areas of microsurgery and supermicrosurgery. The fellow will develop expertise in microsurgery of the breast, head and neck, trunk, and extremity. A high volume and breadth of complex oncologic and traumatic presentations will be encountered with additional opportunities to participate in the care of vascularized composite allotransplant patients.

The fellow will acquire extensive experience in therapeutic and preventative lymphatic surgery and management of lymphatic disease. Advanced training in robotic flap harvest and microsurgical robotics will be provided.

Access to the Cleveland Clinic microsurgery skills training lab and fresh cadaver lab is available. Fellows will participate in research, resident teaching, and departmental educational conferences.

Successful applicants will have completed an accredited plastic surgery training program in US or Canada. Outstanding International applicants with current USMLE and ECFMG certification are also welcomed.
